MILESTONES PPV NATIONAL REPORT 2025

EXECUTIVE SUMMARY

The Milestones assessment is designed to support formative feedback and guide competency development for residents and fellows, ensuring that education and training remain aligned with the evolving needs of patient care. To advance this goal, the ACGME developed predictive probability value (PPV) tables as a practical tool for program directors to identify learners who may benefit from targeted educational support.

PPV tables estimate the likelihood that a resident or fellow will fall short of the recommended graduation target (Level 4.0) for individual subcompetencies by the end of education and training, based on longitudinal Milestone ratings. These probabilities are displayed in matrix form using a heat map format. The estimates are derived from Milestones 2.0 data collected from academic year (AY) 2020-2021 to AY 2024-2025, and are calculated as population-averaged probabilities grouped by post-graduate year and reporting period.

Empirical studies have demonstrated associations between Milestone ratings and key early-career outcomes, including board certification scores (Bienstock et al. 2021; Francisco et al. 2021), patient complaints (Chen et al. in press; Han et al. 2023), and surgical performance (Smith et al. 2024). These findings provide preliminary support for the validity and utility of PPV tables in guiding resident/fellow development.

PPV tables may serve as an informational resource to support:

- Precision education through the early identification of residents and fellows who may benefit from targeted support
- Development of individualized learning plans aligned with each learner's rotation schedule and available program resources
- Reflection by Clinical Competency Committee (CCC) members on their rating practices to promote consistency and fairness across reporting periods, especially at the time of graduation

It is important to note that PPVs reflect national averages and may not fully account for local program variations in rating practices (Hamstra et al. 2025; Holmboe et al. 2020). To address this limitation, a beta testing initiative is currently underway to develop program-tailored PPV reports, enhancing relevance and applicability for individual learning and working environments.

MILESTONES PPV NATIONAL REPORT 2025

INTRODUCTION

One of the key functions of the Milestones assessment system is to provide program directors with actionable information to deliver formative feedback that supports residents' and fellows' competency development throughout education and training. This process helps ensure that physicians are better prepared for an evolving health care environment by aligning learners' competencies with critical patient needs (Batalden et al. 2002; Ericsson 2007; Hodges 2010). Milestone subcompetencies are developed through close collaboration with a range of stakeholders, including ACGME Review Committees, American Board of Medical Specialties Member Boards, American Osteopathic Association Certifying Boards, residency and fellowship program directors, residents, fellows, specialty societies, and the public. The specificity embedded within each Milestone subcompetency is designed to support continuous monitoring of individual developmental trajectories, enabling programs to target specific competencies for growth. This ongoing effort ensures that graduates meet the expected standards of their specialty community and are equipped for independent practice (Institute of Medicine 2014; Nasca et al. 2012; Nasca 2015).

The intent behind the Milestones has been empirically examined through studies of construct validity (e.g., Sun et al. 2025; Hamstra et al. 2021), as well as through analyses of national datasets assessing associations with early-career performance indicators such as board certification exam scores, patient complaints, and post-surgical outcomes (Bienstock et al. 2021; Chen et al. in press; Francisco et al. 2021; Han et al. 2023; Smith et al. 2024). Most studies to date demonstrate that Milestone ratings correlate with expected outcomes that reflect the goals of residency education and training. These findings offer support for the concept of competency-based medical education, as they show alignment between Milestone-based assessments and important patient outcomes, which in turn may suggest potential utility of Milestone ratings as a formative feedback tool to guide resident/fellow development.

Intended Usage of PPV Tables

To translate this concept into practical application, PPV tables have been published by the ACGME since 2019 for each Milestone subcompetency. These tables estimate the likelihood that a resident or fellow will fall below the recommended graduation target (i.e., level 4.0) by the time of program completion, based on national longitudinal Milestones data (Holmboe et al. 2020). This report is designed to inform program directors and Clinical Competency Committees (CCCs) about identifying learners who may benefit from additional educational support for targeted improvement.

MILESTONES PPV NATIONAL REPORT 2025

METHODS

Data Selection

Milestones version 2.0 ratings reported between July 2020 (the mid-year reporting period of AY 2020–2021) and June 2025 (the year-end reporting period of AY 2024–2025) were analyzed. For each specialty, the senior-most learners from the June 2021, 2022, 2023, 2024, and 2025 graduating cohorts were identified, along with their preceding Milestone ratings leading up to graduation.

Milestones 2.0 has been adopted across specialties since its implementation in 2020, with each specialty beginning in a different academic year. For specialties in which learners completed their full educational program using Milestones 2.0 by June 2025, PPVs were calculated using assessment data that reflected their entire education and training periods. For specialties in which the full program was not completed by June 2025, PPVs were calculated using only the assessments available since the implementation of Milestones 2.0. To ensure reliable PPV estimation and protect individual anonymity, the analysis was limited to specialties with more than 75 residents/fellows per graduating cohort.

Outcome Variable

The focal outcome was whether a senior-most resident/fellow fell short of the recommended graduation target level (i.e., level 4.0) for each subcompetency during the final assessment period. Learners who fell short of the target were coded as 1; those who met or exceeded the target were coded as 0.

Predictors

Milestone ratings reported in each six-month reporting period prior to graduation were used as threshold-based predictors for PPV estimation.

Analysis

Milestone ratings were aggregated from different graduating cohorts, grouping data by post-graduate year (PGY) and reporting period (mid-year or year-end). This approach builds on findings by Hamstra et al. (2019), which suggest that CCCs tend to rate learners consistently across cohorts within the same PGY and reporting period. For each subcompetency within each specialty, biannual Milestone ratings were used as thresholds to predict whether a resident/fellow would fall short of the graduation target in the final reporting period. To estimate the proportion of learners who fell short, conditional on a given threshold rating in each prior six-month interval, a generalized estimating equations regression model was applied to generate population-averaged PPV estimates.

MILESTONES PPV NATIONAL REPORT 2025

KEY TO PPV TABLES

PPV tables provide the probability (expressed as a percentage) that a resident/fellow at or below a specific Milestones rating (Level) will fall short of the recommended graduation target (Level 4.0) at the time of graduation. These probabilities are presented in matrix form for each subcompetency, using a heat map format with three colors:

- Light orange (50%–64%): elevated risk
- Orange (65%–79%): moderate risk
- Red (≥80%): highest risk

Table 1 provides guidance on how to use the PPVs, using the example of Patient Care (PC) Subcompetency 1 in a three-year specialty program.

Table 1: Example of PPV Reporting: Patient Care (PC) Subcompetency 1

Subcompetency	Threshold	Yr1, Mid-Year	Yr1, Year-End	Yr2, Mid-Year	Yr2, Year-End	Yr3, Mid-Year
PC01	≤ Lev 5.0	8.8%	8.8%	8.7%	8.6%	8.7%
	≤ Lev 4.5	8.8%	8.8%	8.7%	8.6%	8.9%
	≤ Lev 4.0	8.8%	8.8%	8.7%	8.7%	9.8%
	≤ Lev 3.5	8.8%	8.9%	9.3%	10.6%	19.6%
	≤ Lev 3.0	9.0%	9.6%	11.7%	16.9%	46.4%
	≤ Lev 2.5	9.7%	11.8%	19.8%	37.4%	69.7%
	≤ Lev 2.0	11.3%	16.2%	34.2%	56.8%	72.4%
	≤ Lev 1.5	15.5%	28.1%	40.1%	61.7%	44.0%
	≤ Lev 1.0	20.8%	42.1%	25.3%	13.3%	12.1%

In this example, a resident receiving a rating of 1.5 or lower at the year-end PGY-2 reporting period has a 61.7% probability (based on national data) of falling short of Level 4.0 by the end of a three-year residency in Patient Care Subcompetency 1. PPV estimates vary depending on the Milestone rating and timing of the reporting period. In general, PPVs tend to increase with lower ratings and as the reporting period approaches graduation.

Potential Use Cases

PPV tables indicating elevated risk or higher in one or more subcompetencies by graduation may serve as an informational resource to support both learner competency development and program curriculum enhancement. Specifically, they may inform:

- Early identification of residents/fellows who may benefit from targeted support
- Development of individualized learning plans aligned with each learner's rotation schedule and available program resources
- Reflection by CCC members on their rating practices to promote consistency and fairness across reporting periods, especially at the time of graduation

To support these processes, program educators may consult a range of resources, including: the Milestones Implementation Guidebook, Milestones Guidebook, Milestones FAQs, and Milestones Guidebook for Residents and

MILESTONES PPV NATIONAL REPORT 2025

Fellows. Additionally, the ACGME website provides a Milestones Bibliography that tracks published literature on the Milestones. These resources are available on the [Resources page](#) of the Milestones section of the ACGME website.

Limitations

PPVs represent national averages of residents'/fellows' risk of not meeting the graduation target for each subcompetency. Recent research has highlighted meaningful differences in Milestone rating practices and levels of institutional engagement across programs (e.g., Conforti et al. 2018; Ekpenyong et al. 2022). Notable variation in rating distributions has also been observed across programs (Hamstra et al. 2025; Holmboe et al. 2020). These differences may limit the interpretability of national-averaged PPV reports, particularly for programs with exceptionally high or low numbers of learners not meeting graduation targets (Holmboe et al. 2020).

To address this challenge, a beta testing initiative is underway to generate program-tailored PPV reports. These tailored reports aim to enhance relevance for individual programs by minimizing the impact of cross-program variation. Program directors (particularly those from small programs) who are interested in previewing a beta version of their own program's PPV tables are encouraged to contact Kenji Yamazaki at kyamazaki@acgme.org. Feedback is greatly appreciated and will help inform future improvements in report.

Acknowledgments

The authors would like to thank the program directors who attended the feedback sessions at ACGME Annual Educational Conferences for their valuable insights. We also extend our thanks to the stakeholder groups to whom these results have been presented. Additionally, we owe a great debt of gratitude to the staff members in the ACGME Department of Applications and Data Analysis.
